

```

import java.util.*;

public class ContactManager {
    public static void main(String[] args) {

        HashMap<String, Contact> contacts = new HashMap<>();

        // Step 4: add contacts here
        contacts.put("Alice", new Contact("Alice", "123-456-7890"));
        contacts.put("Bob", new Contact("Bob", "987-654-3210"));
        contacts.put("Charlie", new Contact("Charlie", "555-555-5555"));

        // Step 5: look up a contact
        String searchName = "Myles";
        // retrieve the contact.
        Contact foundContact = contacts.get(searchName);

        // If the result is null (name not found), print: Contact not
found.
        if (foundContact != null) {
            System.out.println("Contact: " + foundContact);
        } else {
            System.out.println("Contact not found.");
        }

        // Step 6: print sorted list
        // Create an ArrayList from the HashMap's values:
        ArrayList<Contact> contactList = new
ArrayList<>(contacts.values());
        // Sort it alphabetically by name using this one line:
        contactList.sort((a, b) -> a.getName().compareTo(b.getName()));

        // header
        System.out.println("=== All Contacts===");
        // Loop through the sorted list and print each contact.
        for (Contact contact : contactList) {
            System.out.println(contact);
        }
    }
}

```
